

ÖZKAN Tilting Disc Check Valve

Technical Guide W4.41

ÖZKAN Tilting Disc Check Valves are light and versatile swing check valves for water applications.

07.22 | W4.47 HAWLE ÖZKAN TILTING DISK CHECK VALVE

Applications

For horizontal and vertical pipelines (adjustable at site)

Raw water, River water, Grey water

Screened effluent

Product Attributes

Short body, small volume and light weight

Swinging disc with or without hydraulic damper

Approvals/Standards

EN 558-1 Series 13 and 14 face to face dimensions

Flanges to AS 4087 Fig. B5

Complies with AS 4794:2001

Quality

ISO 9001:2008 Quality Management Systems

We are the supply partner of choice for New Zealand's civil construction industry, specialising in water and infrastructure based solutions.

Özkan Tilting Disc Check Valve

Design Specifications

- Özkan Tilting Disc Check Valve has a short body design with low weight and small volume.
- High quality coating and materials provide excellent corrosion resistance.
- The spindles which extend on both sides of the check valve enable the installation of lever and counter weight on either side of the check valve for both horizontal and vertical pipe installation.
- This is a free acting check valve that responds to flow velocity with ease and the position of counter weight can be adjusted according to working conditions. These valves are designed as maintenance free and can be supplied metal to metal or with resilient sealing.
- Valves tested to meet the requirements of EN1074 and EN12266

Özkan Tilting Disc Check Valves with Hydraulic Damper

Design Specifications (with Hydraulic Damper)

Özkan Tilting Disc Check Valve with Hydraulic Damper eliminates the slam effect and water hammer across the entire closing stroke.

The closing rate is adjustable depending on operational conditions.

All valve components are designed for high stress caused by damping effect.
